

INTRODUCING ERIMS®

We manage your data so you can manage your compliance

Introducing ERIMS®

ERIMS® (E-records Information Management System) is a purpose built information management system designed for mining and manufacturing companies.

It helps companies to meet their environmental compliance obligations where large volumes of dynamic data must be collected, analyzed, managed and reported.

Accurate information when you need it

ERIMS® recognizes that manufacturing and mining companies typically report to a variety of authorities and agencies, each requiring different formats, data and reporting schedules. It's easy to configure ERIMS® to meet this need. Our system can respond to frequent data changes as you mine new areas or utilize new production processes. It also copes with vast volumes of disparate data and the need for historical and real-time data.

ERIMS® is more than just reporting software. ERIMS® is a management tool that ensures the correct people in your business are notified immediately if a threshold level is exceeded, so prompt action can be taken. It also manages workflow requirements so that the right information reaches the right person at the right time.

If your business faces demanding risk and compliance issues, you need to maintain the best possible systems that can help to avoid breaches and negative impacts on your company's reputation. Nowhere is this more important than where risk involves damage to our environment.

The benefits of ERIMS®

ERIMS® is a vital information tool that:

- Prevents companies from incurring large fines.
- Helps companies to avoid damage to corporate reputation and public perception in respect of environmental obligations.
- Enables accurate and timely reporting on environmental compliance to a range of authorities across a broad range of environmental data.
- Enables companies to effectively manage environmental risk.
- Allows organizations to gather, analyze and report on vast amounts of data from the field, and from multiple places and/or sites.
- Assists on compliance with legislation and/or regulation in different jurisdictions.
- Equips companies with intelligent data to assist with effective corporate governance.
- Is robust and can be configured to meet each client's needs

ERIMS® (E-records Information Management System) is a purpose built information management system designed for mining and manufacturing companies.

Our clients

ERIMS® operates 24/7 all year round and is used by more than 1,000 users.

We have clients that manage thousands of facilities with over 2,000,000 data records; 500,000 electronic files; and output over 5,000 reports per year for submittal to regulatory agencies, all within a complete cradle-to-grave electronic format.

ERIMS® is an integral aspect of how our clients monitor, manage and report on a complex and dynamic array of environmental measurements across multiple facilities and states, as required by various agencies. Our clients include:

- CONSOL Energy
- Coca Cola Enterprises
- Suncor Energy Services
- United Farmers of Alberta (UFA)
- Agrium Industries

ERIMS® - part of WSP Group plc

ERIMS® is a product developed and owned by WSP Environment & Energy.
